

QMS Health Check Focus

A cost-effective, web based solution to
delivering the NHS Health Check programme

QMS HEALTH CHECK FOCUS is a user-friendly web based system, developed to help PCTs, GP surgeries and community providers to effectively implement and manage the national Health Check programme in their area.

Supporting you in delivering the NHS Health Check programme

Across the country, PCTs are tasked with delivering the Health Check programme to assess the risk of heart disease, stroke, type 2 diabetes and kidney disease in eligible patients aged between 40 and 74.

QMS Health Check Focus is designed to efficiently manage this process. It provides an end-to-end service, from identifying and inviting eligible patients for health checks to securely uploading the encrypted results data, and reporting outcomes to the Department of Health.

QMS Health Check Focus is the only system PCTs need to quickly and efficiently deliver the NHS Health Check programme.

QMS HEALTH CHECK FOCUS CAN HELP YOU:

1 Upload patient information securely from GP systems to a centrally-managed database of eligible patients

2 Centrally manage the invitation process and produce call/recall invitation letters for eligible patients at all practices within the PCT

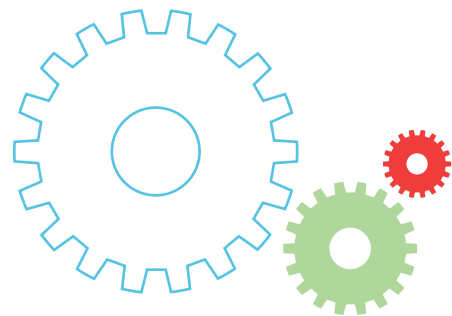

3 Conduct checks from any location, including community settings, and securely upload them directly to the central web based database over N3

4 Calculate a CVD risk score for each patient

7 Generate comprehensive reports including the national NHS Health Check dataset

6 Calculate payments due to GPs and other service providers

5 Automatically forward clinical information to GPs for checks completed in the community

Centralised, easy-to-use, secure: one system for all your needs

QMS Health Check Focus is a web based system that delivers all of the following features and benefits in one, cost-effective package:

- All-in-one web based system saves time and resources, maximises uptake and is fully configurable to suit the needs of the PCT
- Secure encrypted data transfer from all accredited GP clinical systems to a PCT central database
- Centralised register of eligible patients and a call / recall system that automatically excludes ineligible patients i.e. out of age range or with a pre-existing condition
- Easy management of the invitation process, with the central coordinator able to generate letters and reminders for all practices within the PCT
- Fully compliant with the national NHS Health Check dataset
- Intuitive, easy-to-use web interface takes healthcare professionals step by step through the health check process and ensures consistency across community providers
- QMS system integrates seamlessly with GP record systems and ensures health checks completed in the community are automatically notified to GPs
- Comprehensive integrated reporting systems for the Public Health Director, the Commissioner and the Department of Health
- System configured to meet local business rules

Delivering Health Checks in London

Using QMS Health Check Focus, one Primary Care Trust in South East London has successfully completed over 10,000 health checks in nine months.

Delivering the Health Check programme has been a challenge, as the PCT is situated in an area of high social deprivation and health inequalities, with a low uptake of health services in priority populations.

THE STATS

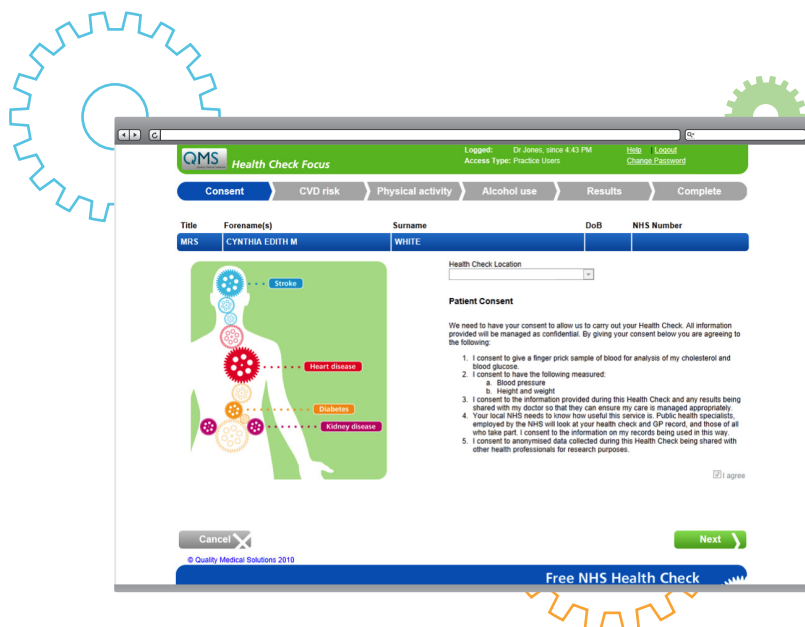

Over a period of nine months in 2011, QMS Health Check Focus has helped the PCT to deliver the following achievements:

- Over 25,000 invitation letters sent out by the central coordinator
- Over 1300 health checks conducted in pharmacies
- Uptake rate of 39% of eligible patients
- Over 840 patients identified as high risk or very high risk of contracting one of the four diseases

Health Check Focus has enabled us to deliver health checks within the community and know that the results get back to the patient's GP in a fast and secure way."

Fraser Serle, NHS Health Checks Project Manager

About QMS

QMS is an experienced data and IT solutions company, specialising in data extraction and analysis. We believe in a systems-based approach to quality improvement, and work closely with NHS customers across the UK to help them gather and use high quality data to support service improvements.

The company was set up in 2003 by Managing Director, Martin Bethell, a practicing GP with over 20 years experience in general practice. Our team of staff includes expertise in clinical general practice and public health, practice management, GP clinical systems, and software development in the NHS.
